7310 4-D REACH-FORK TRUCK

VERSATILE. PRODUCTIVE.
SPACE SAVER.

With increasing demands on operations, efficient use of storage space and increased productivity are critical. The 7310 Reach-Fork® truck is designed with four-directional travel capability — called 4-D® — increasing storage space and aiding operators in handling long, bulky loads with less damage.

The 4-D's articulating load wheels add lateral maneuverability to standard forward and rearward movement – eliminating the need for wide aisles and right-angle turns by allowing operators to travel sideways down narrower aisles with the same wide loads. Aisle widths can be reduced to create up to 40% more storage space.

Designed with the patented open view mast and highly intuitive simultaneous function control handle, operators can place, pick and move big loads more precisely and in less time.

- Applications like home service and lumber stores, steel service centers, plumbing supply, textile industries and manufacturing.

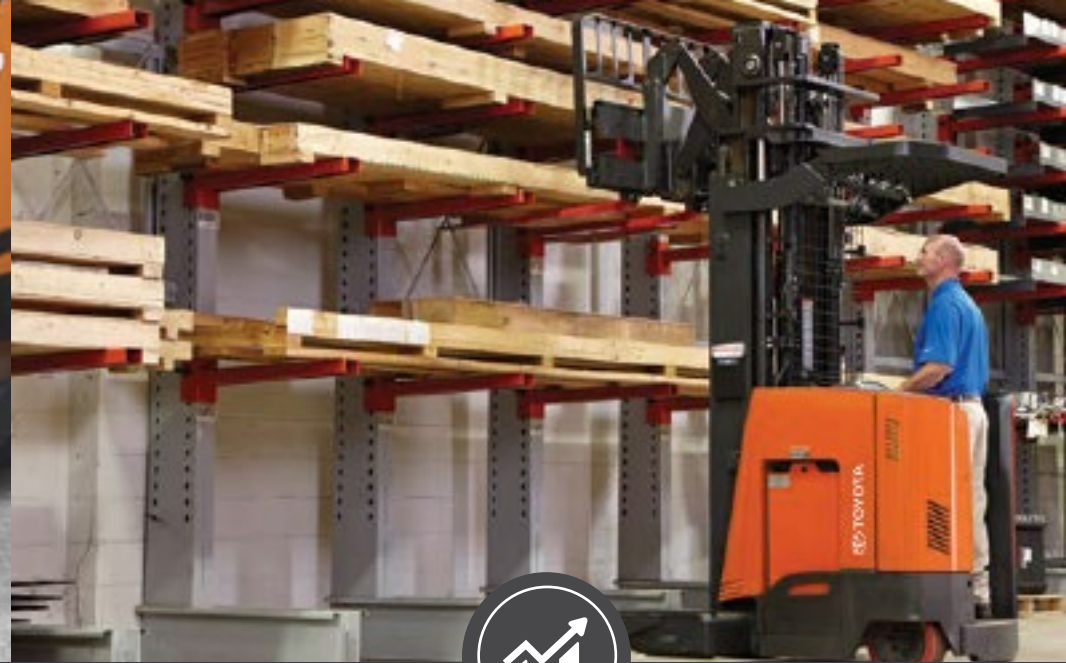

MANEUVERABILITY AND EFFICIENCY

The precision and ease of operation of the 7310 4-D Reach-Fork truck allows denser storage and reduces damage to your inventory, rack and equipment when you need to handle long, bulky loads.

Conventional Storage: Using standard counterbalanced lift trucks, aisles must be wide enough to permit right angle maneuvering with long loads.

7310 4-D Reach-Fork truck: Travel sideways down aisles, eliminate right angle turns, and reduce the potential of loads hitting racks, beams and other stock.
